

WHAT IS CLAIMED IS:

1. A vibration element for a vibration wave driving apparatus, comprising:

5 a first elastic member and a second elastic member; and

an electro-mechanical energy conversion element that is disposed between the first elastic member and the second elastic member,

10 wherein the vibration element has vibrations with a plurality of vibration modes which are different in relative ratio between displacements of respective ends of the vibration element.

2. A vibration element according to claim 1, further comprising:

15 a third elastic member which is disposed between the first elastic member and the electro-mechanical energy conversion element, extends in a direction orthogonal to an axial direction of the vibration element, and has a larger outer diameter than that of
20 the electro-mechanical energy conversion element.

3. A vibration element for a vibration wave driving apparatus, comprising:

25 a first elastic member and a second elastic member;

an electro-mechanical energy conversion element

202570-9254007

that is disposed between the first elastic member and the second elastic member; and

5 a third elastic member that is disposed between the first elastic member and the electro-mechanical energy conversion element, extends in a direction orthogonal to an axial direction of the vibration element, and has a larger outer diameter than that of the electro-mechanical energy conversion element,

10 wherein the vibration element has two portions which are different in dynamic stiffness, the two portions being arranged in the axial direction with the third elastic member taken as a boundary therebetween.

4. A vibration element according to claim 2,
15 wherein the first elastic member has a portion with a smaller outer diameter than that of the second elastic member.

5. A vibration element according to claim 3,
20 wherein the first elastic member has a portion with a smaller outer diameter than that of the second elastic member.

6. A vibration element according to claim 2,
25 wherein the second elastic member is formed of a material with higher stiffness than that of the first elastic member.

2044936-01507

7. A vibration element according to claim 3,
wherein the second elastic member is formed of a
material with higher stiffness than that of the first
elastic member.

5

8. A vibration wave driving apparatus,
comprising:

a vibration element including an
electro-mechanical energy conversion element that is
10 disposed between a first elastic member and a second
elastic member; and

a rotor that is brought into contact with a
frictional surface of the vibration element,

wherein the vibration element has vibrations with
15 a plurality of vibration modes which are different in
relative ratio between displacements of respective ends
of the vibration element.

9. A vibration wave driving apparatus according
20 to claim 8, wherein the vibration element includes a
third elastic member that is disposed between the first
elastic member and the electro-mechanical energy
conversion element, extends in a direction orthogonal
to an axial direction of the vibration element, has a
25 larger outer diameter than that of the
electro-mechanical energy conversion element, and is
provided with the frictional surface.

10. A vibration wave driving apparatus,
comprising:

a vibration element including an
electro-mechanical energy conversion element and a
5 third elastic member that are disposed between a first
elastic member and a second elastic member, the third
elastic member extending in a direction orthogonal to
an axial direction of the vibration element and having
a larger outer diameter than that of the
10 electro-mechanical energy conversion element; and
a rotor that is brought into contact with a
frictional surface of the third elastic member,
wherein the vibration element has two portions
which are different in dynamic stiffness, the two
15 portions being arranged in the axial direction with the
third elastic member taken as a boundary therebetween.

11. A vibration wave driving apparatus according
to claim 10, wherein the vibration element has a
20 portion located on a side of the frictional surface and
a portion located on a side on which the frictional
surface is not provided, with the third elastic member
taken as a boundary therebetween, and the portion
located on the side of the frictional surface has lower
25 dynamic stiffness than that of the portion located on
the side on which the frictional surface is not
provided.

12. A vibration wave driving apparatus according to claim 9, wherein the first elastic member is disposed on a side of the frictional surface of the third elastic member, the second elastic member is disposed on a side of the third elastic member on which the frictional surface is not provided, and the first elastic member has a portion with a smaller outer diameter than that of the second elastic member.

13. A vibration wave driving apparatus according to claim 11, wherein the first elastic member is disposed on a side of the frictional surface of the third elastic member, the second elastic member is disposed on a side of the third elastic member on which the frictional surface is not provided, and the first elastic member has a portion with a smaller outer diameter than that of the second elastic member.

14. A vibration wave driving apparatus according to claim 9, wherein the first elastic member is disposed on a side of the frictional surface of the third elastic member, the second elastic member is disposed on a side of the third elastic member on which the frictional surface is not provided, and the second elastic member is formed of a material having higher stiffness than that of the first elastic member.

15. A vibration wave driving apparatus according to claim 11, wherein the first elastic member is disposed on a side of the frictional surface of the third elastic member, the second elastic member is
5 disposed on a side of the third elastic member on which the frictional surface is not provided, and the second elastic member is formed of a material having higher stiffness than that of the first elastic member.

10 16. A vibration wave driving apparatus according to claim 9, wherein the frictional surface of the third elastic member is provided on an outer side with respect to an outer periphery of the electro-mechanical energy conversion element.

15 17. A vibration wave driving apparatus according to claim 10, wherein the frictional surface of the third elastic member is provided on an outer side with respect to an outer periphery of the electro-mechanical
20 energy conversion element.

18. A vibration wave driving apparatus according to claim 8, wherein at least one end portion in the axial direction of the vibration element has an
25 increased outer diameter.

19. A vibration wave driving apparatus according

2025-04-09 10:45:00

to claim 10, wherein at least one end portion of the vibration element in the axial direction has an increased outer diameter.

5 20. A vibration wave driving apparatus according to claim 9, wherein the first elastic member and the third elastic member are formed integrally.

10 21. A vibration wave driving apparatus according to claim 10, wherein the first elastic member and the third elastic member are formed integrally.

15 22. A vibration wave driving apparatus according to claim 9, wherein the third elastic member is formed of a material having abrasion resistance.

20 23. A vibration wave driving apparatus according to claim 10, wherein the third elastic member is formed of a material having abrasion resistance.

24. A vibration wave driving apparatus according to claim 9, wherein the frictional surface of the third elastic member is provided with a member having abrasion resistance.

25

25. A vibration wave driving apparatus according to claim 10, wherein the frictional surface of the

third elastic member is provided with a member having abrasion resistance.

26. A vibration wave driving apparatus according to claim 9, wherein the third elastic member has grooves for augmenting vibration displacement formed on its both surfaces, respectively, arranged in the axial direction of the vibration element.

27. A vibration wave driving apparatus according to claim 10, wherein the third elastic member has grooves for augmenting vibration displacement formed on its both surfaces, respectively, arranged in the axial direction of the vibration element.

28. A vibration wave driving apparatus according to claim 8, further comprising:

a driving circuit for selecting a driving signal for exciting one of the plurality of vibration modes and applying it to the electro-mechanical energy conversion element.

29. A vibration wave driving apparatus according to claim 8, further comprising:

a driving circuit for applying a driving signal to the electro-mechanical energy conversion element, the driving signal producing a vibration mode which causes

a less distortion of the electro-mechanical energy conversion element, and is selected from the plurality of vibration modes.

5 30. A vibration wave driving apparatus,
comprising:

20 a vibration element including an
electro-mechanical energy conversion element and a
third elastic member which are disposed between a first
10 elastic member and a second elastic member, the third
elastic member extending in a direction orthogonal to
an axial direction of the vibration element and having
a larger outer diameter than that of the
electro-mechanical energy conversion element; and

15 a rotor that is brought into contact with a
frictional surface of the third elastic member,

 wherein the third elastic member has grooves for
augmenting vibration displacement formed on its both
surfaces, respectively, arranged in the axial direction
20 of the vibration element.

 31. A vibration wave driving apparatus according
to claim 30, wherein the grooves are provided on an
inner periphery side with respect to the frictional
25 surface of the third elastic member.

 32. A vibration wave driving apparatus according

to claim 30, wherein shapes of the both surfaces of the third elastic member in the axial direction of the vibration element are asymmetrical to each other.
